The U.S. liability shift dates for EMV migration are set. Issuers, and acquirer-processors must now begin their EMV programs to comply with these deadlines, protect their existing businesses and take advantage of new opportunities. Leveraging new smart card technologies and avoiding the many technical challenges that EMV presents requires a special skill set. It requires experience in areas where many financial institutions have limited resources and knowledge. Solid, tangible EMV expertise is thin on the ground. While many will make claims, few can demonstrate an authentic track record.

Since the inception of EMV, SCIL EMV consulting, integration and project management services have helped issuers, acquirers and processors navigate quickly and cost effectively to EMV. SCIL's EMV ready solutions and methodologies are unique because they easily adapt and integrate to our clients' current environments, making the project management and integration of EMV seamless with significant cost savings.

Our solutions are backed by the most knowledgeable EMV experts on the market – our consultants have been involved in more than 42 EMV implementations worldwide. Add in our 24/7 global supports and its no surprise that they call us America's EMV Migration Expert.

SCIL's QuickSmart™ EMV consulting services methodology sets a new standard for EMV payment services. It allows issuers, processors and acquirers to migrate to EMV in two distinct phases. It assures that the migration projects will be completed on time and on budget.

QuickSmart™ EMV comes in two phases.

- Phase I: **The Discovery Phase.** This includes the education and assessment stages. It takes customers from knowing little about the EMV technology and its business and operations implications to understanding what they need to do to migrate.
- Phase II: **The Delivery Phase.** Here, the results of the Discovery Phase are used to manage, integrate and rollout the EMV migration

SCIL is uniquely positioned to support your EMV program. SCIL adds value at each stage. From achieving overall objectives through training, requirements review and project health checks to providing expert resource directly into your project teams at any stage from strategic planning and business case through testing, implementation and roll-out.
